DETAILED ACTION

In response to the amendments filed on 9/14/2009, claims 1, 13-15, and 18 have been amended. Claims 1 and 13-19 are pending in the current application.

Allowable Subject Matter

1. Claims 1 and 13-19 allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The claims of the instant invention are directed towards a gaming machine comprising a game cabinet configured to house a game processor and a first game peripheral allowing play of at least one game; a power supply located within the gaming cabinet wherein the power supply is operably connectable to an external power source. The power supply includes switched and unswitched connections arranged to provide that a game processor is coupled to the unswitched connection and wherein first game components are electrically isolated from the power supply when the power supply is turned off and the game processor continues to remain electrically connected to the power supply. The game machine cabinet is structured in a way so that a first lockable external access panel configured to only allow access to the switched connections and a second lockable access panel located within the gaming cabinet, the second lockable access panel configured to only allow access to the unswitched connections.
4. In the closest prior art of record, Luciano teaches specifically a lockable security cabinet for casino game controllers. Luciano teaches a lockable security cabinet that allows access to specific areas and controls of a main cabinet so that only authorized persons having a proper key for reach of particular area or control have the ability to reach sensitive areas of a game machine housed in the cabinet. Luciano specifically teaches providing a security cabinet that provides a

first lockable structure to limit access to game control components such as the power supply but does fairly teach or suggest providing a first and second lockable access panels. Therefore in combination with the intervening limitations of the independent claims 1, 13, and 18, the instant claims provide the additional observation that of providing security access panels specifically with power supplies contained within a gaming machine cabinet and providing a first and second lockable access panel to provide differentiating between unswitched and switched connections in a power supply of a gaming machine.

5. In a related computing patent, Osaki teaches performing procedures to maintain power using power connections to provide power to a processor directly while service and maintenance is being performed on the computing system. However, Osaki does not fairly teach or suggest providing a lockable access panel to a housing cabinet that provides a lockable access panel to a first portion where the switched components of the power supply are connected and a second portion of the power supply where unswitched components are connected.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
